

LIQUI-HARD

is recommended wherever hardened, dustproofed and improved chemically resistant surfaces are required.

W. R. MEADOWS

LIQUI-HARD®

You own your floor forever. Why would you want to treat it more than once?

Ideal applications:

- Industrial plants
- Warehouses
- Storage silos
- Sewage plants
- Chemical processing facilities
- Refineries
- Civic centers
- Sports arenas
- Stadiums
- Hospitals
- Airports
- Museums
- Food processing

What about the environment?

Through 80+ years of research and development, W. R. MEADOWS has recognized the need for, and subsequently produced, environmentally friendly products to meet all types of building needs—hence developing the “Green Line”—our environmentally friendly line of products.

By using VOC-compliant LIQUI-HARD from W. R. MEADOWS, you gain the prestige and peace of mind that goes along with utilizing quality materials, while at the same time considering the environment, worker safety and ease of application.

Whatever your needs...
we have the solution.

LIQUI-HARD

You've made a **major investment** in your new concrete floor...how long do you expect it to last?

You've made a major investment in your facilities and that investment deserves the very best protection available. There's only one company that has consistently helped owners improve the protection of their floors against:

- **Chemical attack**
- **Staining**
- **Permeable fluids**
- **Wear and degradation**

For over 80 years, **W. R. MEADOWS** has been recognized as the leader in developing and producing the highest quality PRODUCTS for CONCRETE PERFORMANCE. We have built a coveted reputation among architects, engineers and contractors for producing the highest quality products backed by 80+ years of experience.

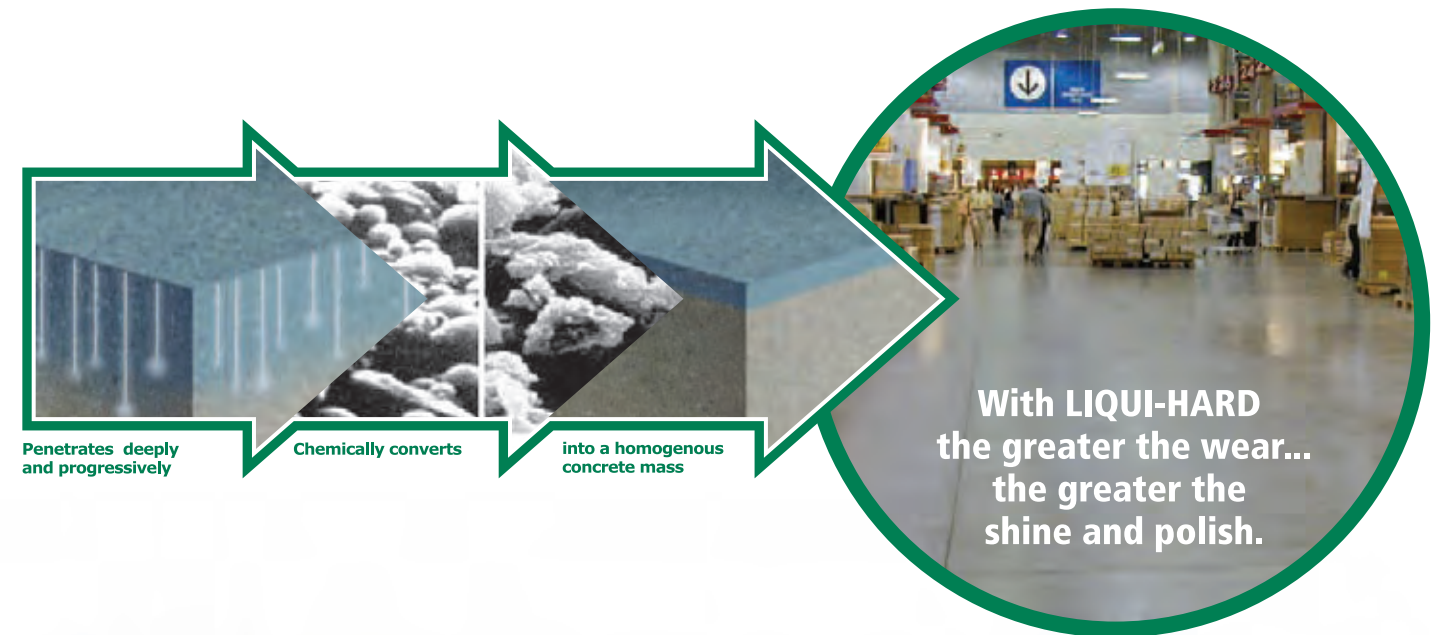

What is **LIQUI-HARD?**

LIQUI-HARD Concrete Densifier and Chemical Hardener Compound is a ready-to-use, colorless liquid, made of proprietary reactive chemicals that deeply penetrate the surface of concrete. Through a chemical reaction process, LIQUI-HARD penetrates progressively through the concrete and chemically solidifies it into a homogeneous concrete mass. The unique blend of chemically reactive raw materials provides the highest level of protection for your concrete as proven by independent test results.

The **LIQUI-HARD** process

The "weak link" in your floor is the cement used to bind aggregate together. Cement alone has poor compressive strength and low wear resistance. On your floor, the effects of carbonation and the weakening of the surface of the concrete due to exposure to carbon dioxide and moisture can cause dusting and premature degradation.

LIQUI-HARD, when used on a concrete surface, penetrates progressively through the concrete surface and converts the weak calcium hydroxide and other available calcium ions in the concrete into calcium silicate hydrate (CSH), producing a hard, dense and sealed surface.

Benefits

Untreated

Treated

Reduced permeability and staining

Increased abrasion resistance

Self-polishing, reduces marking

Expedite the polishing process by burnishing

Increased light reflectivity indoors and out
